

RB ROLLED RUBBER PRODUCTS

RB Rolled Rubber offers superior durability and is suitable for interior applications in areas that require resilience, sound absorption, spike resistance and traction. Available in black, natural (with a small amount of white flecs) or black with colored flec, this line of rubber products has been specifically designed and manufactured for durability.

BENEFITS

Environmentally Friendly Because of the high level of recycled material in each roll, RB Rolled Rubber meets and exceeds the requirements set forth in U.S. Executive Order 13101, *Greening the Government* and can be a contributing factor towards LEED Green Building Council certification.

Durable Custom-formulated, high strength polyurethane binders, similar to those used in synthetic running tracks, are used in the construction of RB Rolled Rubber.

Shock and Sound Absorbing Used in indoor applications, RB Rolled Rubber features resilient, shock, and sound absorbing qualities along with excellent traction and anti-skid properties. It also serves as an effective buffer against acoustical vibration.

Versatile Standard 9.5mm (3/8") product is always available from inventory. Custom thicknesses are also available. Call for details.

Aesthetic RB Rolled Rubber is available in a variety of colors, natural and solid black. The colored particles are uniformly distributed throughout the entire product and provide dramatic interior design effects. The colored flec rolls are manufactured from premium recycled black rubber particles and colored EPDM rubber.

Anti-Fatigue Resilience RB Rolled Rubber is fabricated from thousands of fine rubber granules and offers superior underfoot comfort. Its resilient properties cushion the strain from running, exercising, walking or standing.

Easy to Clean Cleaning involves a broom, damp sponge mop or vacuum cleaner. If desired, a mild detergent such as CleanVia CV-1000 can be used to sanitize the flooring.

APPLICATIONS

- Fitness Centers
- Commercial flooring
- Assembly lines
- Horse & livestock trailers
- Libraries & Bookstores
- Retirement Centers
- Hotels
- Handicap accessways
- Basements
- Runways/walkways
- Restaurants
- Day Care Centers
- Ski lodges
- Sound proofing
- Heavy traffic areas
- Corridors
- Educational Buildings
- Healthcare
